

Yes Energy's latest product, NodalView, provides the first true view of Nodal Exchange's marketplace through maps, charts, and easy-to-use web-based software.

NodalView brings the locations to a locational market.

- Identify geographic trends and anomalies in pricing.
- Visualize price movements across and within each Nodal Exchange future expiry.
- Study nodal or spread positions.
- Fast interfaces make it quick to drill for detail.
- Find all the historical Nodal Exchange data available in one place.
- Updates in real-time to show you the results of every auction.

Pairing NodalView and PowerSignals extends the research even further.

- Track how the ISO real-time and day markets relate to Nodal Exchange settlements.
- Research and visualize the planned and unplanned transmission events that affect your nodal positions.
- Competitive Intelligence: learn which market participants have strong FTR positions on nodes you're willing to trade.
- Explore the trends in LMP components that may cause price separation between an FTR and a Nodal Exchange position.
