Yes Energy PowerSignals™ Nodal Market Decision Support System Expands Coverage to New ERCOT Nodal Market

Boulder, Colorado (October 27, 2010) –Yes Energy has announced PowerSignals™, the leading graphical decision support system for trading in nodal markets, has expanded coverage to include the new ERCOT nodal market scheduled to open in December 2010.

“Any companies planning to trade in physical or financial deals in ERCOT’s new nodal market should take a look at PowerSignals, said Yes Energy President, Michael McNair. “PowerSignals is a comprehensive information system that traders in other ISOs rely on for fast access to live data and research functions. Just as with the other ISOs, our ERCOT tools will cover Virtuals and CRRs. All the real time scanning and visualization features – including maps – will be available for the ERCOT market.”

PowerSignals is a graphical decision support system specifically-designed to optimize trading in nodal markets. PowerSignals provides live, customizable maps and charts that allow users to quickly scan and determine which nodes have the best long or short returns. Users can leverage historic trading data to reduce risk or find new opportunities. They can highlight key trends on the grid and back test trading strategies for individual nodes, or for entire portfolios.

About Yes Energy

Headquartered in Boulder, Colorado, Yes Energy provides web-based, graphical decision support products and analytic support services and to traders in electric power markets. Yes Energy’s software and data systems are designed to directly assist traders in their daily research routine - saving time and expanding views of complex nodal markets. Yes Energy combines quantitative analysis, large dataset management, unique visualization, and dynamic software applications to create new ways of understanding power markets. PowerSignals™, the company’s flagship software product, offers the fastest, easiest, and most reliable tools for tracking the performance of virtuals, FTRs (CRRs), and spreads in nodal markets.
