

Identify the Right Projects Before You Commit Capital

GridSite® helps energy asset developers identify the most profitable project opportunities, evaluate long-term market risk, and build revenue assumptions they can confidently defend. Make better siting and investment decisions before committing development capital.

USE CASES

- ✓ Greenfield site screening
- ✓ Historical market analysis
- ✓ Long-term revenue forecasting
- ✓ Basis and congestion analysis
- ✓ Evaluate interconnection activity
- ✓ PPA and operating asset benchmarking
- ✓ Volatility and peak-to-trough analysis

What You Can Do with GridSite

Historical Market Performance

See how locations have actually performed, validating the assumptions behind every forecast.

Revenue Forecasts You Can Defend

Transparent hourly long-term nodal forecasts, across multiple market scenarios.

Future Grid Evolution

Track generation, transmission, and load growth shaping tomorrow's congestion and basis risk.

Benchmark Against Existing Assets

Compare proposed projects to operating assets and billions of real power transactions.

Analyze everything in one platform, from regional screening to nodal analysis, without stitching together multiple tools or consultant studies.
